

PSC Better Than Paint News

The **Calgary Flames Community Arenas** faced two major problems. The building was 40 years old and was in desperate need of an update. Secondly, the building's exterior stucco was cracked and either had to be waterproofed or replaced.

With a costly stucco replacement project in front of them, they turned to the **PSC Better Than Paint** to seal & waterproof their existing stucco and metal cladding. **PSC Better Than Paint** gave the Flames Community Arenas a much needed cosmetic facelift, but also provided the needed protection to secure the building's envelop from water damage.

"Our clients trust our products because the work."
