PSC Metallics Epoxy Flooring

PSC Metallics Epoxy Flooring System is composed of an epoxy primer, a two component colored binder (base coat 1), and Metallic's epoxy top coat.

FEATURES:

- Standard Metallic Colours available below, call for more colors
- Two design options, each with significant 3D depth effect:
 - Marbled or Cloud design effect
 - Trowel-down design
- Self Healing character minimizes scratching; with PSC 2304 epoxy top coat- '30% - 90% flexibility'
- UV resistant, resists yellowing
- Sanitary, seamless, and easy to maintain; superior mechanical and chemical resistance.
- Low maintenance and its high density prevents dirt penetration.
- This flooring system is applicable where a durable, decorative esthetic effect is desired.

DESIGNED FOR USE IN: Retail, offices, laboratories, health care facilities, vehicular showrooms, residential floors. This flooring system provides an attractive solution for flooring requirements.

PSC Metallic's are designed to be added to Polymer Science Corporation's 100% solids epoxy coatings. A one unit pack is mixed to one USG of epoxy. Colours shown use 'denatured alcohol' for marbled metallic aesthetic effect. Alternative 'troweled' design effect also can be achieved with metallics. See PSC Representative for details. **NOTE:** Colors are approximate; see PSC samples for exact colour.
